DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 11, 12 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sato et al.

The Sato et al reference teaches the czochralski method for growing silicon, note entire reference. A melt is created in a silica crucible and a seed is contacted with the melt. The seed is raised in such a manner to create a silicon single crystal ingot, note, col. 1. The crucible is made by the arc plasma method, note co. 3. The sole difference between the instant claims and the prior art is the method to create the crucible. However, it would have been obvious to one of ordinary skill in the art to create the

crucible by different methods and still have a crucible, which is effective in the czochralski method. Also, note, claim one does not set forth crucible properties.

Response to Applicants' Arguments

Applicant's arguments filed April 3, 2006 have been fully considered but they are not persuasive.

Applicants' argument concerning the Sato reference is noted. However, the claims 11 and 12 are directed to a method of seed pulling. The Sato reference does teach the method of seed pulling silicon from a silica crucible. While the reference does not teach the method of silica crucible production, that is not the method being claimed. Further, in claims 11 and 12, the crucible is a mere piece of apparatus. There is no evidence of record that the instant crucible creates any unexpected results or materially affects the czochralski method of growing silicon. Thus, the rejection over the Sato reference will be maintained.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
